Adaptors for Mod. Lube-Mec for the filling of screw cartridges

The Lube-Mec system works with a special void technology that ensures the complete use of the grease of the cartridge and it eliminates problems of supply continuity in comparison with the guns with traditional systems. Since you don't have to unscrew the hose of the head of the greaser, the cartridge recharge is quicker. When replacing the cartridges there are no air cavities.

This technology ensures the usage of all the grease of the cartridge.

With this system there is a very small percentage of wearing parts, so the grease guns have a long life.
